## Portland cement M-500 D0

✓ 100 % quality

✓ 50 kg  $\pm$  1 %

The high quality of the cement allows it to be performed with confidence in any construction work.

Description of physical and chemical properties of the product:

Results of 28-day strength test of cement grade: 500

Normative composition of clinker: Not normalized

Amount of mineral additives in cement: <0% (less than 0%)

3-day compression ratio (MPa): Not normalized

28-day compression ratio (MPa): 49.0

Standard setting time of cement paste: <45 minutes (not less than 45 minutes)

Standard time of cement hardening: <10 hours (not more than 10 hours)

28-day flexural strength (MPa): <5.9 (not less than 5.9 (MPa))

# CEMENT

## Portland cement M-400 D20

✓ **100 % quality**

✓ **50 kg ± 1 %**

This product in the form of dry powder is widely used in industrial construction. By reacting with water, the cement hardens over time to form a plastic solution that retains its strength for hundreds of years.

Description of physical and chemical properties of the product:

The result of a 28-day strength test of cement grade with Portland cement mineral admixtures: 400.

Normative composition of clinker: Not normalized.

Amount of mineral additives in cement: <20% (less than 20%).

3-day compression ratio (MPa): Not normalized.

28-day compression ratio (MPa): 39.2.

Typical start time of cement paste: <45 minutes (not less than 45 minutes).

Standard time of cement hardening: <10 hours (not more than 10 hours).

28-day flexural strength (MPa): <5.4 (not less than 5.4 (MPa)).

Portland cement M-400 is able to harden not only in air, but also in direct water.

Due to this unique property of the material, it is widely used in construction.

# CEMENT BULK M400 D20

## Portland cement M-400 D20 bulk

### ✓ 100 % quality

This product in the form of dry powder is widely used in industrial construction. By reacting with water, the cement hardens over time to form a plastic solution that retains its strength for hundreds of years.

Description of physical and chemical properties of the product:

The result of a 28-day strength test of cement grade with Portland cement mineral admixtures: 400.

Normative composition of clinker: Not normalized.

Amount of mineral additives in cement: <20% (less than 20%).

3-day compression ratio (MPa): Not normalized.

28-day compression ratio (MPa): 39.2.

Typical start time of cement paste: <45 minutes (not less than 45 minutes).

# GYPSUM

## Gypsum plaster (in brand bags)

✓ 100 % quality

✓ 40 kg  $\pm$  2 %

White and high quality gypsum from ALBUS brand.

Our enterprise has a production capacity of 73,000 tons of gypsum per year. Our gypsum can be used for the production of gypsum board, dry building mixes, gypsum block, foam block, armstrong and other types of construction materials. Our product is distinguished by a high level of quality and whiteness.

# GYPSUM

## Gypsum plaster (in simple bags)

✓ **100 % quality**

✓ **40 kg ± 2 %**

White and high quality gypsum from ALBUS brand.

Our enterprise has a production capacity of 73,000 tons of gypsum per year. Our gypsum can be used for the production of gypsum board, dry building mixes, gypsum block, foam block, armstrong and other types of construction materials. Our product is distinguished by a high level of quality and whiteness.

# GYPSUM

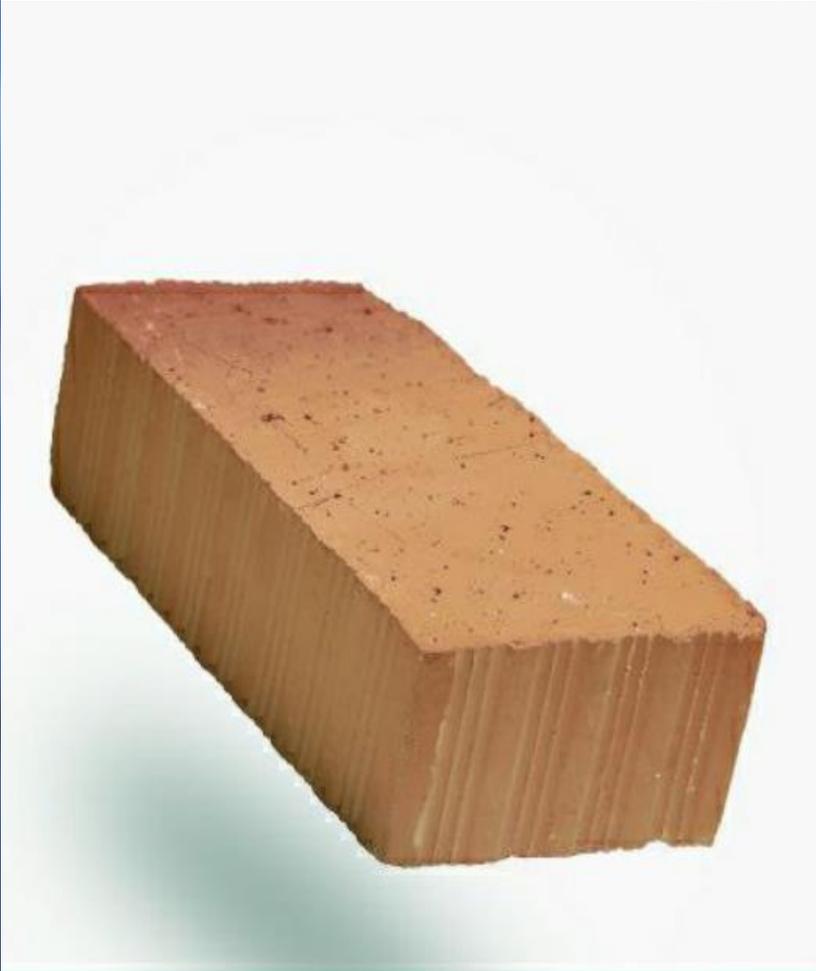

## Gypsum plaster (bulk)

✓ **100 % quality**

White and high quality gypsum from ALBUS brand.

Our enterprise has a production capacity of 73,000 tons of gypsum per year. Our gypsum can be used for the production of gypsum board, dry building mixes, gypsum block, foam block, armstrong and other types of construction materials. Our product is distinguished by a high level of quality and whiteness.

# BRICK

## Brick

✓ **100 % quality**

Baked brick is used in construction works for the construction of various structures and buildings. Increases the durability of buildings and structures.

Dimensions: 250x120x65

Advantages:

- Protects from external cold and heat;
- Provides long service life;
- At a low price;
- Quality guaranteed.

# TURK-ALBUS

# TURK-ALBUS

The trademark **TURK-ALBUS** was founded in 2019. It succeeds in production of **tile glue**, **gypsum plaster**, **decorative plaster “Dojdik”**, **putty FASAD**, **decorative plaster “Travertine”**.

Our products are based on Turkish recipes. The advantage of **TURK-ALBUS** over other manufacturers is that our products are and **salt-resistant**. The most important thing is that our prices are two or three times **affordable** than other products in the domestic market.

# TURK-ALBUS

## DECORATIVE PLASTER "TRAVERTINE"

**100 % quality**

Travertine decorative plaster products are used for the exterior of single and multi-storey buildings. Our products with code №002 are not salty. Resistant to moisture, snow and rain.

Advantages:

- Resistant to various weather conditions;
- Cheap;
- Quality.

These products are also available in chocolate, red and ivory colours.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

## TILED GLUE

**100 % quality**

Tile glue is used to glue tiles to decorative flat walls, pools or concrete floors.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

## ROT BAND PLASTER

### 100 % quality

Used for leveling uneven areas of the wall before plastering the interior. Increases the strength of rubbed walls. Fills uneven surfaces and makes them smooth. It flattens the corners of buildings, filling doors, door frames.

Advantages:

- No cracking, displacement at any thickness;
- Cheap;
- Quality.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

## FACADE

### 100 % quality

Cement-based exterior facades, walls and exteriors of buildings are used after the wall is plastered evenly. Resistant to external environment, moisture, snow and rain.

Advantages:

- Resistant to various weather conditions;
- Cheap;
- Quality.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

## PUTTY SUPER FINISH

### 100 % quality

**SUPER FINISH** The interior putty is mainly used for the interior of buildings. It is used after the interior walls of the building are thoroughly leveled.

Advantages:

- Resistant to various weather conditions;
- Cheap;
- Quality.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

## DECORATIVE PUTTY "DOJDIK"

### 100 % quality

The product is mainly used on rotband used flattened walls for exterior decorative plaster and is resistant to snow and rain due to its content of 30% cement.

TURK-ALBUS products are based on Turkish technology. High quality, competitive.

# TURK-ALBUS

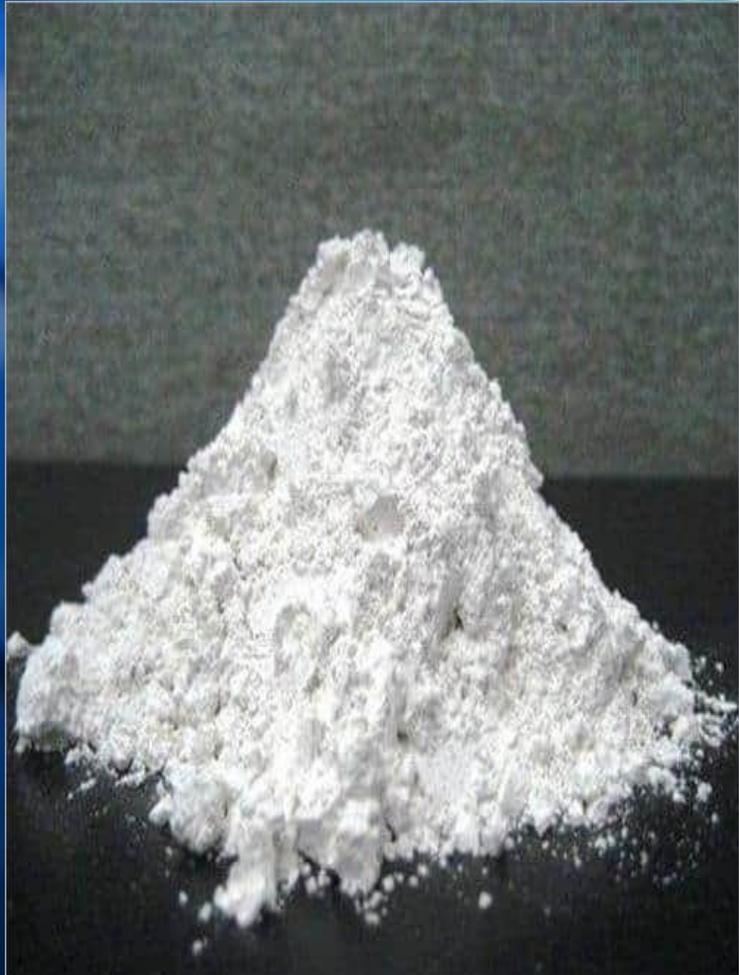

## DECORATIVE PUTTY "DOJDIK"

### 100 % quality

The product is mainly used on rotband used flattened walls for exterior decorative plaster and is resistant to snow and rain due to its content of 30% cement.

# ALBUS LIMESTONE

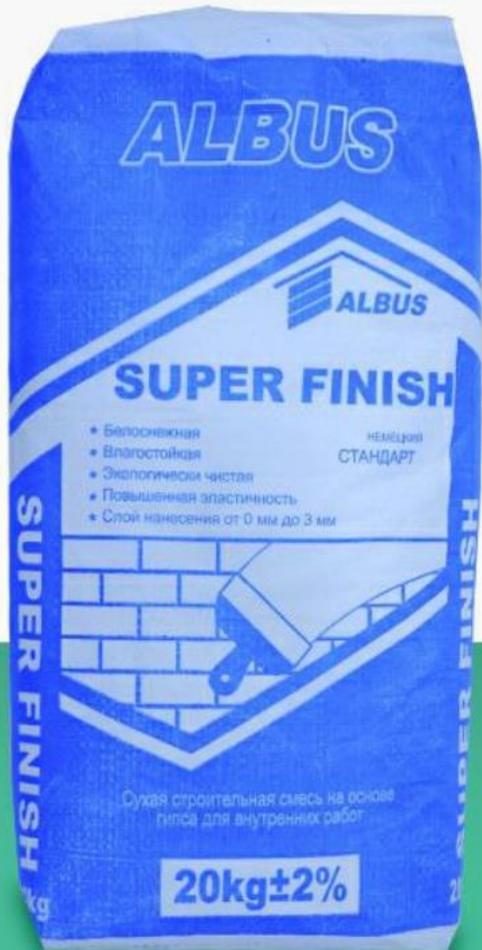

## Limestone

### **100 % quality**

Limestone flour is used in road construction, roofing materials, putty, as a special additive to concrete, in the production of feed for animals and birds (compound feed) and in agriculture, as a chemical fertilizer.

The content of calcium in our limestone (dolomite flour) is 33%. And it is unique in the republic in this regard. Delivery of high quality products in the desired quantity and on time is guaranteed.

# ALBUS

## SUPER FINISH 01 – reinforced gypsum construction mix

### ✓ 100 % quality

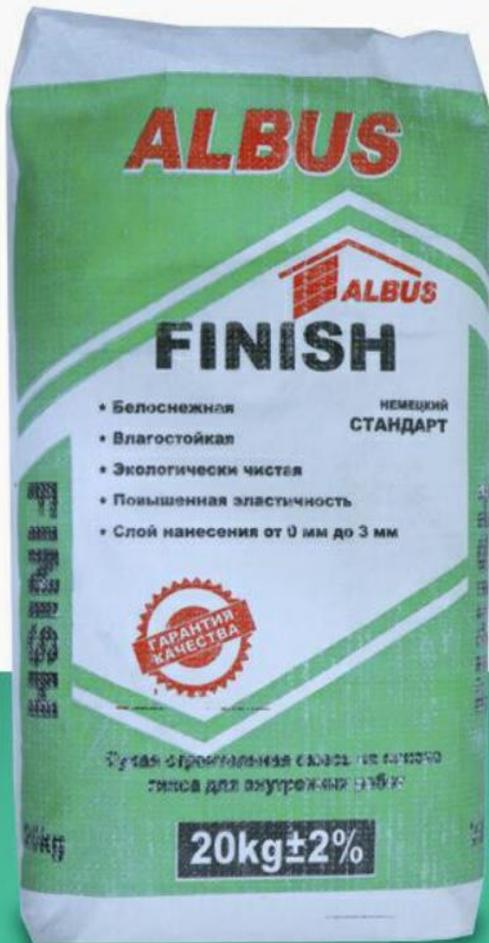

It is mainly used in the finishing work of the inner surface, to make it very smooth and sleek.

The mixture is made from the finest microns and the highest quality raw materials.

### Advantages:

- Retains moisture, reduces paint consumption and enhances the brightness of the coated paint;
- Cheap price;
- Quality guaranteed.

# ALBUS

## FINISH – standardized makeup blend

### ✓ 100 % quality

Normalised make-up mix FINISH is a gypsum, internal dry construction mix. This product is used in the initial process of construction finishing, finishing interior surfaces, smoothing uneven areas, corners and slopes. Hardness property is normalised.

Advantages:

- Quality;
- Cheap;
- Long-lasting.

Except the walls, may be used for decorative panels and plasterboard concrete coverings.

# ALBUS

## FASAD – cement mixture for leveling, grinding and smoothing

✓ 100 % quality

Cement mixture for the smoothing, grinding mode

Exterior and interior cement added construction mix. The mixture is used to make the surfaces smooth before external finishing works.

Advantages:

- Resistant to moisture, salinity and cold heat;
- At a low price;
- Quality is guaranteed.

# ALBUS

## GLATT – gypsum added, internal dry construction mix

### ✓ 100 % quality

It is used in the initial process of construction finishing of interior surfaces, smoothing of uneven areas, corners and slopes. Hardness property is standardized.

Advantages:

- Quality;
- Cheap;
- Long-lasting.

Except the walls, may be used for decorative panels and plasterboard concrete coverings.

# ALBUS

## SATEN – gypsum added, internal dry construction mix

### ✓ 100 % quality

It is used in the initial process of construction finishing of interior surfaces, smoothing of uneven areas, corners and slopes. Hardness property is standardized.

Advantages:

- Quality;
- Cheap;
- Long-lasting.

Except the walls, may be used for decorative panels and plasterboard concrete coverings.

# ALBUS

## ECONOM – gypsum added, internal dry construction mix

### ✓ 100 % quality

It is used in the initial process of construction finishing of interior surfaces, smoothing of uneven areas, corners and slopes. Hardness property is standardized.

The ECONOM is packaged in a more affordable way than other internal blends. Made from fine micron and quality raw materials. The construction of a large facility plays an important role in saving money on decoration work due to its low cost.

Advantages:

- Quality;
- Cheap;
- Long-lasting.

Except the walls, may be used for decorative panels and plasterboard concrete coverings.

# ALBUS

## ROTBUS (ROTBAND) is a durable plaster mixture

✓ **100 % quality**

Sturdy plaster mix

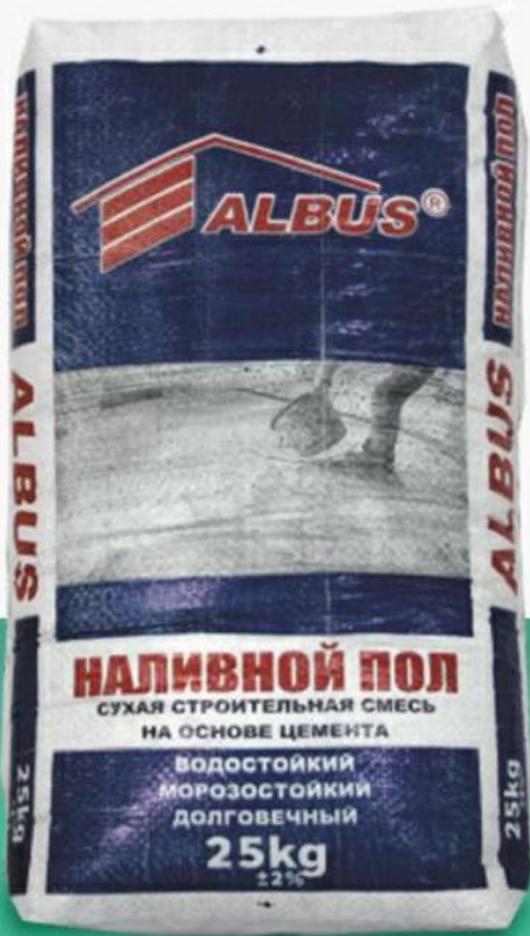

Gypsum added, internal plaster mixture. The mixture is applied to any surface. Increases the strength of rubbed walls.

Fills uneven surfaces and makes them smooth. It flattens the corners of buildings, filling doors, door frames.

Advantages:

- No cracking, displacement at any thickness;
- Cheap and high quality.

# ALBUS

## NALIVNOY POL - flatness and precision are now in one product

### ✓ 100 % quality

Flatness and clarity are now in one product

A mixture containing cement. Basically, concrete smoothes the floor surface, closing cracks and potholes, making it very flat.

Advantages:

- Moisture resistant;
- Facilitates the work of masters and promotes quality output;
- Cheap;
- Quality.

# ALBUS

## TILE CLAY (Reinforced)

### ✓ 100 % quality

The adhesive property of this mixture is enhanced and is used in tile, paving stone, marble granites, interior and exterior plasters.

Advantages:

- High resistance to salt, water, hot and cold weather;
- Product without worrying about quality;
- Cheap;
- Quality.

# ALBUS

## TILE CLAY

✓ **100 % quality**

This mixture is used in tile, paving stone, marble granites, interior and exterior plasters. Contains cement.

Advantages:

- High resistance to salt, water, hot and cold weather;
- Product without worrying about quality;
- Cheap;
- Quality.

# ALBUS

## PVA GLUE 0.7-0.8KG - a quality product for pre-finishing

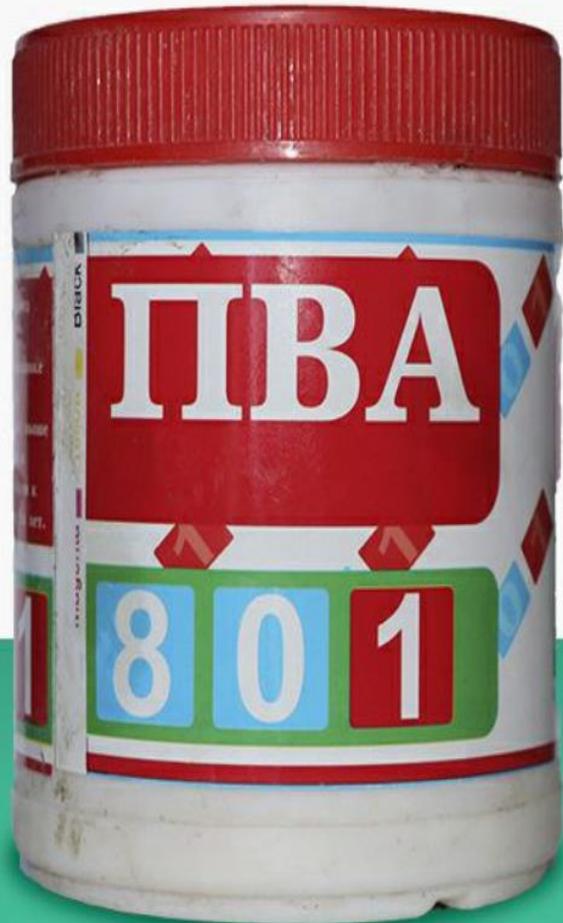

### ✓ 100 % quality

Quality product for pre-decoration preparation

PVA GLUE is mainly used in gluing wood and gypsum products. The product serves as a preparation for the subsequent finishing work. The product has advantages with its quality.

Advantages:

- Cheap;
- Quality;
- Guaranteed sales.

# ALBUS

## COLORLESS GROUND 1KG & 3 KG - Primer before finishing

✓ **100 % quality**

Primer paint before finishing

Primers do not reveal salts on the surface of the plaster. Forms a film on the plaster, which ensures good adhesion and strengthens the plaster work of the next stage.

Reduces paint consumption.

Advantages:

- Cheap;
- Quality;
- Economical product.

# ALBUS

## COLORLESS GROUND 5 KG - Primer before finishing

✓ **100 % quality**

Primer paint before finishing

Primers do not reveal salts on the surface of the plaster. Forms a film on the plaster, which ensures good adhesion and strengthens the plaster work of the next stage.

Reduces paint consumption.

Advantages:

- Cheap;
- Quality;
- Economical product.

# ALBUS

## WHITE ENAMEL PF-115 UNIVERSAL – 2,8 kg

✓ **100 % quality**

White enamel paint is mainly used in various wood products, walls, door frames, and various decorative works. This product makes the quality of the painted surface parts and increases the shelf life.

Advantages:

- Protects from external cold and heat;
- Increases the shelf life of products;
- At a low price;
- Quality guaranteed.

# ALBUS

## WHITE ENAMAL PAINT PF-115 – 2,8 kg

### ✓ 100 % quality

White enamel paint is mainly used in various wood products, walls, door frames, and various decorative works. This product improves the quality of painted surface parts and increases their shelf life.

### Advantages:

- Protects from external cold and heat;
- Increases the shelf life of products;
- At a low price;
- Quality guaranteed.

# ALBUS

## WHITE ENAMAL PAINT PF-115 – 2,8 kg

✓ **100 % quality**

Protect your floor from rot!

Contains lacquer. Part of the floor is used in painting the foundations. Increases the shelf life of painted surfaces and protects them from moisture and rot.

Advantages:

- Cheap price;
- Quality guaranteed.

# ALBUS

## FLOOR ENAMAL PAINT PF-266 – 2,8 kg

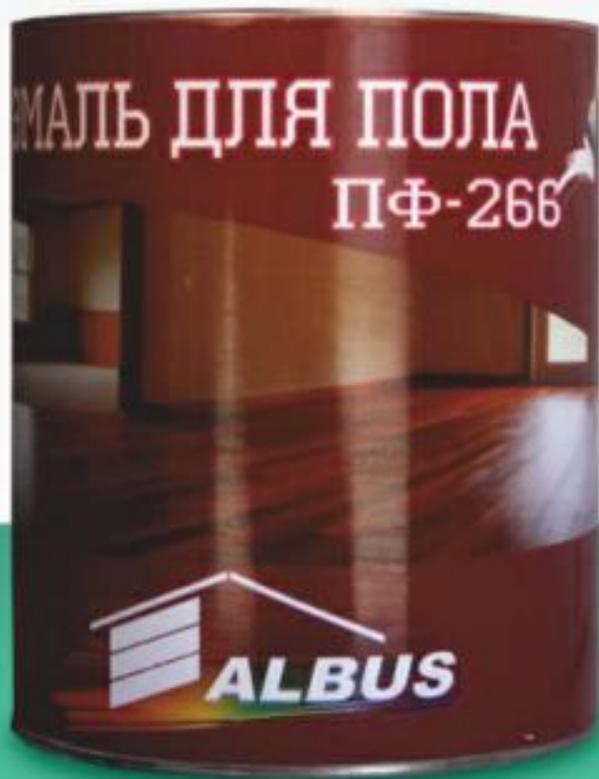

✓ **100 % quality**

Protect your floor from rot!

Contains lacquer. Part of the floor is used in painting the foundations. Increases the shelf life of painted surfaces and protects them from moisture and rot.

Advantages:

- Cheap price;
- Quality guaranteed.

# ALBUS

## Bordeaux Enamel Paint – 2,8 kg

✓ **100 % quality**

Protect your floor from rot!

Contains lacquer. Part of the floor is used in painting the foundations. Increases the shelf life of painted surfaces and protects them from moisture and rot.

Advantages:

- Cheap price;
- Quality guaranteed.

# ALBUS - EMULSION

## EMULSION WHITE START – 5; 10; 15; 20 kg

✓ **100 % quality**

Primer paint before MAKE-UP

Primers do not reveal salts on the surface of the plaster. Forms a film on the plaster, which ensures good adhesion and strengthens the plaster work of the next stage. Reduces paint consumption.

Advantages:

- Cheap;
- Quality;
- Economical product.

# ALBUS - EMULSION

## EMULSION WHITE START – 5; 10; 15; 20 kg

✓ **100 % quality**

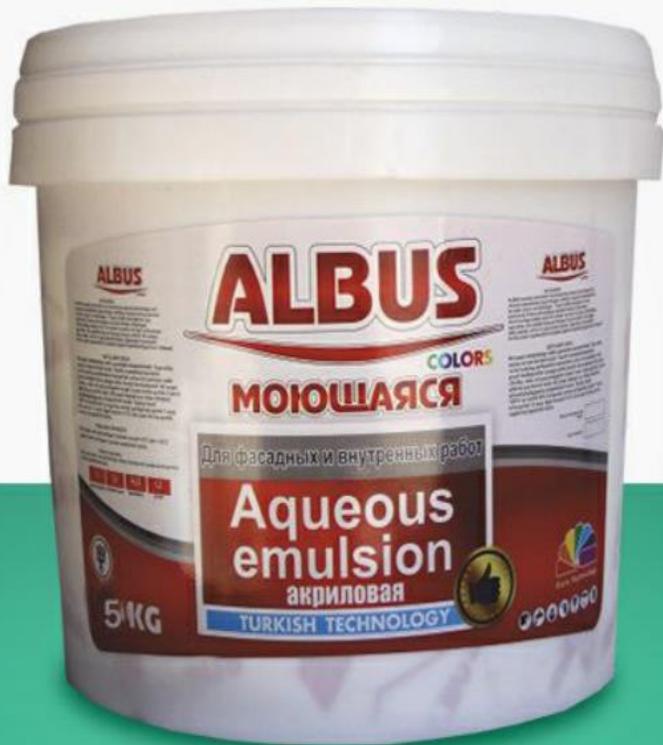

Reflect elegance and elegance in your home!

Emulsion white acrylic is an aqueous, acrylic paint used in the first stage and in the makeup process. Add water to the product in moderation and mix the color (cholora). Used as a paint for interior and exterior facades.

Advantages:

- Cheap price
- Quality and environmentally friendly product.

# ALBUS - EMULSION

## EMULSION WHITE ACRYL (Washing) – 5; 10; 15; 20 kg

### ✓ 100 % quality

The amount of raw materials added to the product is adapted to humidity, sunlight, cold climates. Used for exterior and interior facades in the first stage and in the finishing process. It plays an important role in the quality and longevity of makeup work.

### Advantages:

- Affects the longevity of makeup;
- Increased economy;
- Cheap;
- Quality.

# ALBUS - EMULSION

## Facade color emulsion(white, orange and peach color) – 20 kg

### ✓ 100 % quality

Naturalness and durability are now in one product.

Our product is made with the addition of naturally occurring colors. It is used in painting and decoration of exterior and interior facades with the addition of water in moderation.

Colored paint emulsions maintain a level of quality even in sunlight, humidity and cold weather.

Advantages:

- Cheap;
- Quality;
- Eco-friendly product.

# ALBUS - EMULSION

**Facade color emulsion (white, orange and peach color) – 20 kg**

✓ **100 % quality**

You can choose any of these colors, those in the picture.

Colored paint emulsions maintain a level of quality even in sunlight, humidity and cold weather.

Advantages:

- Cheap;
- Quality;
- Eco-friendly product.
